

ABSTRACT OF THE DISCLOSURE

The present invention provides a system and method for providing exception handling for a computer program. In architecture, the system includes a class creator that establishes a plurality of classes of exception types, and an exception capture
5 mechanism that captures an exception. An exception notice generator generates an exception notice for the exception. The present invention can also be viewed as a method for providing exception handling for a computer program. The method operates by establishing a plurality of classes of exception types, and capturing an exception. An exception notice for the exception is then provided.
